PROFESSIONAL SUMMARY

Results-oriented Software Developer and Data Analyst with expertise in Python and SQL. Proven track record in building full-stack scalable systems and processing high-volume financial data. Experienced in translating complex business requirements into technical solutions, ranging from freelance ERP architectures to algorithmic trading engines.

WORK EXPERIENCE

Freelance Full Stack Developer | Remote | June 2025 – Present (6 Mos) Project: WholeSaleManager (Enterprise Resource Planning Suite)

- Architected a **custom ERP solution** using **Django REST Framework** and **Next.js** to digitize operations for a wholesale client, managing HR, inventory, and finance modules.
- Designed a normalized **PostgreSQL database schema** to handle complex relationships between daily sales registers, employee attendance, and retailer credits.
- Implemented a "Cash Denomination" algorithm to automate end-of-day financial reconciliation, **reducing manual accounting errors by over 40%.**
- Secured sensitive financial data using **JWT authentication** and **role-based access controls (RBAC)** for Admins, DSOs, and Staff.

KEY PROJECTS

TradingAlgos: High-Frequency Trading Engine | Python, SQL, Pandas

- Engineered a robust algorithmic trading bot capable of ingesting and processing massive financial datasets in real-time using **WebSockets** and **SmartAPI(AngelOne)**.
- Built a high-performance **PostgreSQL** data pipeline to log tick-by-tick market data, enabling efficient querying for historical backtesting and strategy validation.
- Utilized **Pandas** and **NumPy** to calculate complex technical indicators (OI, RSI, MACD) on the fly, generating automated buy/sell signals with low latency.

Bank Churn Prediction | Data Science, Machine Learning

- Developed a predictive model to identify at-risk customers, performing rigorous data cleaning and feature engineering on large customer datasets.
- Leveraged **SQL** for **data extraction** and Python libraries (**Scikit-learn**) to train models, achieving high accuracy in forecasting customer retention trends.

TECHNICAL SKILLS

- **Languages:** Python (Advanced), SQL (PostgreSQL/MySQL), JavaScript (ES6+), C++.
- **Data Analysis:** Pandas, NumPy, Matplotlib, Data Visualization, Complex Query Optimization.
- **Development:** Django, Django REST Framework (DRF), Next.js, React, FastAPI, HTML/CSS.
- **Tools & Platforms:** Git/GitHub, Postman, Linux, VS Code, Jupyter Notebooks.

CERTIFICATIONS & ADDITIONAL

- **Internshala:** C/C++, Python, ReactJS, DSA, Prompt Engineering
- **Performance:** Typing Speed 50 WPM (98% Accuracy)
- **Soft Skills:** Problem Solving, Critical Thinking, Adaptability, Active Listening.
